

GEN ENG 205-2 ENGINEERING ANALYSIS 2: STATICS – SECTION 24

Instructions and review for final exam

1. Date, Time, and Location: The exam will be **Wednesday March 13, 12-2 pm** and it will take place in **Tech LR3**. Try to arrive a few minutes early so you can get ready. If you have accommodation, you will receive an email with the room number.

2. References and calculators. You may bring 3 pages (6 sides or 3 pages front and back) 8 ½ x 11 cheat sheets (handwritten or typed). Bring the calculator you have been using to work on the problems. If you have a spare calculator, bring it too!

3. Office hours and questions: You will have extensive TA office hours from Saturday 3/9 to Wednesday 3/13 just before the exam. Announcement with specific hours will be available on Canvas.

4. Exam content: It will consist of six problems

- 1 problem on material from Chapters 2,3,4
- 1 problem on Chapter 5
- 2 problems on Chapter 6 (one truss & one frame)
- 1 problem on Chapter 7
- 1 problem on Chapter 9

5. Suggestions

Review class problems, homework assignments, recitation problems and homework solutions from Canvas. The book also includes solved problems you can check. A practice final exam will be uploaded on Canvas, its solutions will be available Saturday 3/9.

Please solve the class problems manually (rather than just reading my solutions), cover my solutions, and then verify your answer afterward. It's okay if you initially approach the problem incorrectly; you can then correct yourself to avoid repeating those mistakes in the final exam.

Thank you for filling out the CTEC!

Thank you all for a great quarter. I will see many of you again next quarter/next year, if not I wish you the best in the rest of your years here at NU as well as in your professional life.
